Summary

Full Stack Developer with hands-on experience building production-grade MERN Stack applications, multi-provider LLM integrations, and RESTful APIs. Skilled in designing scalable architectures, implementing JWT-based authentication with OAuth 2.0, and deploying serverless Node.js backends. Passionate about clean UI/UX, API security, and role-based access control across end-to-end web applications.

Education

Parul University <i>Bachelor of Technology (B.Tech) Computer Science and Engineering (CSE)</i> CGPA: 7.63/10	Vadodara, Gujarat 2024 – Present
Bhagwan Mahavir University <i>Diploma in Computer Engineering</i> CGPA: 8.06/10	Surat, Gujarat 2021 – 2024

Technical Skills

Languages: JavaScript (ES6+), TypeScript, Python
Full Stack: MERN Stack (MongoDB, Express.js, React.js, Node.js), REST API Design & Development, CRUD Operations
Frontend: React.js, Redux, Tailwind CSS, HTML5, CSS3, Framer Motion, shadcn/ui, Responsive Design
Backend & APIs: Node.js, Express.js, RESTful API Development, JWT Authentication, OAuth 2.0, Vercel Serverless Functions
AI & Integrations: Multi-provider LLM Integration (OpenAI, Claude, Gemini), Google Generative AI, OpenAI API
Databases: MongoDB, Mongoose, Schema Design, Data Modeling, Firebase Firestore
Auth & Cloud: Firebase Auth, Google OAuth, Passport.js, Cloudinary, Vercel, CI/CD Pipeline
Tools: Git, GitHub, Vite, Postman, npm, VS Code
Practices: Agile/Scrum, MVC Architecture, RBAC, API Security, Code Versioning, Responsive Design

Certifications

- Prompt Engineering & UI/UX Design – Parul University
- AI for Business – HP

Projects

PromptForge Verse <i>React 18, TypeScript, Vite, Tailwind CSS, Node.js, Express.js, Firebase, Google Generative AI</i> Live Demo
- Developed a production-ready full stack AI prompt engineering platform using React 18 and a Node.js/Express.js serverless backend, transforming raw ideas into optimized prompts for any AI model. - Built a multi-provider LLM integration layer with an intelligent fallback system across OpenAI, Claude, and Gemini APIs — ensuring 100% uptime and zero downtime in production. - Implemented JWT-based authentication and Google OAuth 2.0 using Firebase Auth, with role-based access control (RBAC) securing all API routes and user data end-to-end. - Developed an image-to-prompt analysis engine using Google Generative AI to reverse-engineer visual content into high-fidelity prompts via CRUD-based REST API endpoints. - Engineered and deployed a Vercel serverless Node.js backend with CI/CD pipeline via Vercel Git integration and cross-browser compatible responsive UI using shadcn/ui.
StockFlow ERP <i>MERN Stack (MongoDB, Express.js, React.js, Node.js), Redux, Tailwind CSS, Passport.js</i> Live Demo
- Developed a production-ready full stack ERP system using the MERN Stack with real-time inventory management, sales tracking, and a RESTful API backend. - Designed MongoDB schemas with Mongoose for inventory, sales, and user collections, applying data modeling best practices and optimizing CRUD operations for real-time ERP performance. - Managed global application state using Redux with async thunks for cart, inventory, and authentication flows — enabling predictable state management across complex UI interactions. - Implemented JWT-based authentication and Google OAuth 2.0 using Passport.js with role-based access control (RBAC), securing all API routes and protecting sensitive business data. - Built an analytics dashboard with data visualization, automated PDF invoice generation, and transactional email notifications via Node.js — reducing manual reporting effort significantly.
