Summary

Full Stack Developer with hands-on experience building production-grade MERN Stack applications, multi-provider LLM integrations, and RESTful APIs. Skilled in designing scalable architectures, implementing JWT-based authentication with OAuth 2.0, and deploying serverless Node.js backends. Passionate about clean UI/UX, API security, and role-based access control across end-to-end web applications.

Education

Parul University

Bachelor of Technology (B.Tech) | Computer Science and Engineering (CSE)

- CGPA: 7.63/10

Vadodara, Gujarat

2024 – Present

Bhagwan Mahavir University

Diploma in Computer Engineering

- CGPA: 8.06/10

Surat, Gujarat

2021 – 2024

Technical Skills

Languages: JavaScript (ES6+), TypeScript, Python

Full Stack: MERN Stack (MongoDB, Express.js, React.js, Node.js), REST API Design & Development, CRUD Operations

Frontend: React.js, Redux, Tailwind CSS, HTML5, CSS3, Framer Motion, Responsive Design

Backend & APIs: Node.js, Express.js, RESTful API Development, JWT Authentication, OAuth 2.0, Vercel Serverless Functions

AI & Integrations: Multi-provider LLM Integration (OpenAI, Claude, Gemini), Google Generative AI, OpenAI API

Databases: MongoDB, Firebase Firestore

Auth & Cloud: Firebase Auth, Google OAuth, Passport.js, Cloudinary, Vercel, CI/CD Pipeline

Tools: Git, GitHub, Vite, Postman, npm, VS Code

Practices: Agile/Scrum, MVC Architecture, RBAC, API Security, Code Versioning, Responsive Design

Certifications

- Prompt Engineering – Parul University
- UI/UX Design – Parul University
- AI for Business – HP

Projects

PromptForge Verse | *React 18, TypeScript, Vite, Tailwind CSS, Node.js, Express.js, Firebase, Google Generative AI* Live Demo

- Developed a production-ready full stack AI prompt engineering platform using React 18 and a Node.js/Express.js serverless backend, transforming raw ideas into optimized prompts for any AI model.
- Built a multi-provider LLM integration layer with an intelligent fallback system across OpenAI, Claude, and Gemini APIs — ensuring 100% uptime and zero downtime in production.
- Implemented JWT-based authentication and Google OAuth 2.0 using Firebase Auth, with RBAC securing all API routes; developed image-to-prompt analysis engine via Google Generative AI.
- Engineered and deployed a Vercel serverless Node.js backend with CI/CD pipeline via Vercel Git integration and cross-browser compatible responsive UI.

Navivo — AI Trip Planner | *React 19, TypeScript, Node.js, Express.js, MongoDB, Socket.io, Firebase, Groq, Gemini* Live Demo

- Engineered a full-stack AI travel planning platform generating 3 personalized trip plans (Budget / Standard / Premium) with complete cost breakdowns, hotel suggestions, booking links, and pros/cons tailored to user budget.
- Implemented a multi-provider AI fallback chain using Groq (LLaMA 3.3-70B) as primary and Google Gemini 1.5 Flash as failover, with real-time plan streaming via Socket.io WebSocket events — ensuring zero downtime on AI quota limits.
- Built Firebase Authentication with Google OAuth 2.0 and email/password login; applied structured prompt engineering to force strict JSON schema output enabling dynamic cost card rendering client-side.
- Optimized auth performance by decoupling Firebase resolution from MongoDB sync — reducing initial load to under 200ms for returning users via Zustand localStorage persistence.

StockFlow ERP | *MERN Stack (MongoDB, Express.js, React.js, Node.js), Redux, Tailwind CSS, Passport.js*

Live Demo

- Developed a production-ready full stack ERP system using the MERN Stack with real-time inventory management, sales tracking, and a RESTful API backend.
- Designed and optimized MongoDB collections for inventory, sales, and user data — improving CRUD performance and supporting real-time ERP operations at scale.
- Implemented JWT-based authentication and Google OAuth 2.0 using Passport.js with role-based access control (RBAC), securing all API routes and protecting sensitive business data.
- Built an analytics dashboard with data visualization, automated PDF invoice generation, and transactional email notifications via Node.js — reducing manual reporting effort significantly.
